

## BACKUP DATABASE SECTION

The most important element in Pustaka is the database. Imagine the nightmare where thousands of material records suddenly lost due to hard disk crash or power failure. Always backup the database at least once a month to other computer, hard disk, ZIP drive or blank CDR. Even though database backup every month is a tedious task, you will never regret if the bad things happen. **Always backup your database !**

You can access this utility from menu Maintenance>Utility>Backup Database

Click OK to backup and choose the new location e.g CDR, other computer
